The via ferrata is a route traced on the rock wall, equipped in such a way as to allow the user to attach himself to a protection system (lifeline cable) to avoid falling, by means of a power dissipater, carabiners, harness and helmet. There are elements to aid progression, such as steps and hand or foot holds.

The via ferrata and the equipped path of Ribes de Freser has a maximum difficulty of K3, which implies having to do strength with hands and feet, but it is accessible with a normal physical condition and for children from 10 years old and 45 kg. Children under 45 kg will have to be secured with the rope.

If it is your first experience or you want to enjoy it accompanied, in Vall de Ribes you will find a wide offer of mountain guides at Ski&Mountain, in 972 72 73 39.

There is a public car park at the entrance of the village (tourist office) or in the sports area.

Pure adrenaline in unique surroundings.
